

Hi! I'm Thanuja Sathsara

UNDERGRADUATE

sathsaravx@gmail.com | +94 774231152

Self-motivated, ambitious software engineer seeking to join a professional organization, contribute to innovative projects, and achieve continuous career growth.

HANDS-ON EXPERIENCE

EXAMFLOW ENTERPRISE : EXAM MANAGEMENT SYSTEM

FULL-STACK PROJECT · DJANGO, REACT, TYPESCRIPT, POSTGRESQL · 2026 · [ONGOING]

An exam management platform for an education organisation with several branches. It handles student registration, admission, results, medical approvals and documents, with five user roles that each have their own access

- Built a modular REST API with Django 5 and DRF. Workflows run on state machines, so records can only move through valid steps.
- Added secure authentication: JWT with rotating refresh tokens, Argon2 hashing and account lockout. Role-based permissions are covered by a generated test for every role and endpoint.
- Added audit trails, optimistic locking and structured logging that hides personal data.
- Built the React 18 + TypeScript frontend with MUI, TanStack Query and Zod, with navigation that changes by role.

TECHNICAL SKILLS

Problem Solving
- Requirements understanding
- Problem decomposition
- Logical thinking & Decision making

Programming
- Python/JavaScript / TypeScript
- Data structures
- Algorithms
- Object-oriented programming
- Error handling

Databases
- SQL/PostgreSQL/MySQL
- Data modeling
- Relationships
- Constraints
- Query optimization
- Indexes

Backend & Frontend
- REST APIs/Django REST Framework
- React/TypeScript/Tailwind
- API validation
- Authentication
- Authorization
- Component architecture
- React Router
- API integration

Security
- RBAC
- CORS/CSRF/XSS
- JWT

- Containerised the system with Docker (PostgreSQL, Redis, Celery, Nginx) and set up CI/CD with GitHub Actions. Tested with pytest, Vitest and Playwright.

MULTI-COLLEGE STUDENT MANAGEMENT PLATFORM

FULL-STACK PROJECT · DJANGO, REACT, POSTGRESQL,REACT,VITE,THREE.JS | [FEB 2026 – CONTINUE]

A web platform for an education group with several branches. It includes the public website, online admissions, a staff portal and a paid video-learning site, and each branch sees only its own data.

- Set up role-based access so staff roles apply company-wide or to a single branch. Logins are recorded, and new staff must change their temporary password the first time they sign in.
- Built the admissions process from first inquiry to enrolment. It covers the fixed review steps, fee plans with instalments, online registration fee payment and status tracking by reference number
- Built a paid video-course site with lesson progress tracking, using the PayHere payment gateway. The server verifies each payment notification before accepting it.
- Added a Google Gemini chat assistant that answers questions using live course data and saves interested visitors as leads.
- Built the React frontend: 50+ pages, multi-step forms, a staff dashboard and a 3D branch map made with Three.js.

EDUCATION

BEng (Hons) Software Engineering
at the Informatics Institute of Technology (IIT), affiliated with the University of Westminster, UK.
2022-2027

G.C.E Advance Level - Passed
2019

EXTRACURRICULAR ACTIVITIES

Video Editing 3D Editing Research
